Institut für Wissens- und Sprachverarbeitung

# Outline

- 1. Evolving Objects: Evolutionary Computation Framework**
2. JGAP: Java Genetic Algorithms Package
3. ECJ - Evolutionary Computation Java
4. EASEA
5. EvA2

# Überblick

[Keijzer et al., 2002]

- Template-based C++ - Library
- very large kit of modules for EAs
- unrestricted combination of modules
- easy to expand

# Overview

[Keijzer et al., 2002]

# Representation of individuals

Many predefined representations of individuals:

- binary-Strings
- permutations
- vectors
- lists
- ...

Moreover, very easy to adapt on user-defined data structures

# Paradigms to develop

Referring to the lecture, there are many paradigms implemented:

- Evolutionary Strategies
- Genetic Algorithms
- Particle Swarm Optimization
- ...

# Methods on selection

Implemented methods for selection:

- Rank based
- deterministic or stochastic Tournaments
- Roulette
- Elitism
- ...

# Genetic Operators

Ready-to-use Operators:

- Uniform Initializer ( $0 \rightarrow n$ )
- Gaussian Mutation ( $1 \rightarrow 1$ )
- Subtree-Crossover ( $2 \rightarrow 2$ )
- ...
- arbitrary  $n \rightarrow m$  operators realizable

# Summary

- very fast and flexible library
  - can be easily adapted to user demands
  - 2001 first publication, since then continuous development
  - Plattform-independent
- 
- `http://eodev.sourceforge.net`

# Outline

1. Evolving Objects: Evolutionary Computation Framework
- 2. JGAP: Java Genetic Algorithms Package**
3. ECJ - Evolutionary Computation Java
4. EASEA
5. EvA2

# JGap

Java Genetic Algorithms Package [Meffert, ]

- Java-library for genetic algorithms and genetic programming
- some predefined operators
- many examples
- Tutorials and JavaDoc

# Scientific background

- JGap is heavily used in university/scientific context
- Dissertations
- Diploma thesis
- Conference paper
- ...

# Genetic Programming

- specialisation on genetic programming
- creates Java-class
- based on JUnit-Tests
  
- **RobocodeJGAP**: GP-Project with focus in robot programming

# Summary

- Java-library with scientific background
- many examples
- **Demo:** Monalisa-Painting-App (tries to paint the Mona Lisa with simple triangles)
- <http://jgap.sourceforge.net>

# Outline

1. Evolving Objects: Evolutionary Computation Framework
2. JGAP: Java Genetic Algorithms Package
- 3. ECJ - Evolutionary Computation Java**
4. EASEA
5. EvA2

# A Java-based Evolutionary Computation Research System

- Java-based Framework for evolutionary algorithms and genetic programming
- many predefined functions and operators
- specialization on genetic programming
- written in Java - plattform independent

# Features

- embedded GUI (unfortunately not easy to use)
- Hierarchical parameter files where important configurations of the EA can be made
- Multithreading
- distribution of computations over several computing machines (with exchange of individuals via Island Model)

# Paradigms

- Genetic Algorithms
- Genetic Programming
- Evolutionary strategies  $(\mu, \lambda)$  und  $(\mu + \lambda)$
- Differential Evolution
- Particle Swarm Optimization

# Operators

Große Auswahl an:

- Initializing factors
- Selection methods (with or without elitism)
- preimplemented mutation and crossover operators

# Genetic Programming

- Preference on genetic programming
- primarily tree representation but predefined grammar can be used, too
- rather functional programs (Composition of mathematical functions) than linear programs (Scripts, Loops, Branch operations)
- can handle strong typed functions but also automatical defined functions and macros

# Summary

- very powerful and popular framework
- Java-Base
- huge community
  
- <http://www.cs.gmu.edu/~eclab/projects/ecj/>
  
- Further links to other frameworks on the website.

# Outline

1. Evolving Objects: Evolutionary Computation Framework
2. JGAP: Java Genetic Algorithms Package
3. ECJ - Evolutionary Computation Java
- 4. EASEA**
5. EvA2

# EASEA - EAsy Specification of Evolutionary Algorithms

- Plattform for Evolutionary Algorithms
- Evolutionary algorithm can be defined in a special language
- special compiler transfers EA in a set of C++ files
- special optimizations for Multicore-, Distributed systems and computations on graphic cards/accelerators

# EASEA

# EASEA

- many elements of the EA are already implemented
- user-defined adaptations and operators can be realized easily
- compiled C++ files can be embedded in a larger, user project
- many parameter of the EA can be set easily via several configuration files
  
- `http://easea.unistra.fr/easea`

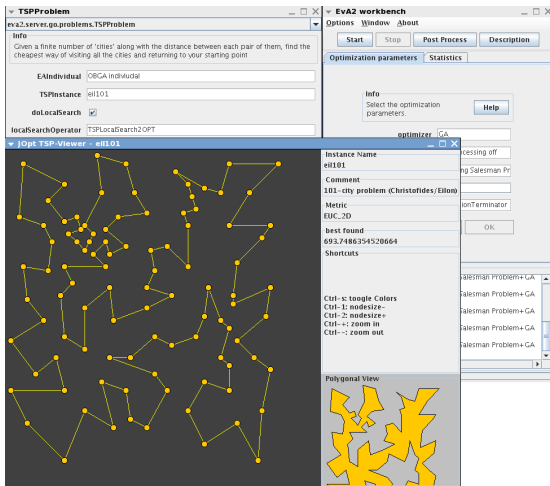

# Outline

1. Evolving Objects: Evolutionary Computation Framework
2. JGAP: Java Genetic Algorithms Package
3. ECJ - Evolutionary Computation Java
4. EASEA
- 5. EvA2**

## EvA2

- Java-based framework for Evolutionary Algorithms
- GUI to specify all the parameters of the EA
- own classes can be load into GUI (development via special API)
- many opportunities to evaluate and compare between different algorithms
- developed in university context (Uni Tübingen), strong application in scientific context (usage in at least 40 publications)

# EASEA

The screenshot displays the EASEA software interface, which is used for solving Traveling Salesman Problems (TSP). It consists of several windows:

- TSPProblem**: A configuration window for the TSP problem. It includes an "Info" section with a description: "Given a finite number of 'cities' along with the distance between each pair of them, find the cheapest way of visiting all the cities and returning to your starting point." Below this are fields for "EAIndividual" (set to "OBGA Individual"), "TSPInstance" (set to "eil101"), "doLocalSearch" (checked), and "localSearchOperator" (set to "TSPLocalSearch2OPT").
- EvA2 workbench**: The main control window. It has tabs for "Options", "Window", and "About". Below these are buttons for "Start", "Stop", "Post Process", and "Description". There are also tabs for "Optimization parameters" and "Statistics". An "Info" section contains the text "Select the optimization parameters." and a "Help" button. A dropdown menu for "optimizer" is set to "GA".
- JOpt TSP-Viewer - eil101**: A visualization window showing a 2D city layout with yellow dots representing cities and yellow lines representing the tour. The background is dark grey.
- optimizer**: A small dialog box that provides details about the current instance. It includes fields for "Instance Name" (eil101), "Comment" (101-city problem (Christofides/Eilon)), "Metric" (EUC\_2D), and "best found" (693.7486354520664). It also lists "Shortcuts" and "Polygonal View" (shown as a yellow polygonal shape).

# Paradigms

- (Multi Start) Hill Climbing, Simulated Annealing
- Evolutionary strategies
- Genetic Algorithms
- Differential Evolution
- Particle Swarm Optimization
- Niche-based approaches
- ...

# Application - Examples

- university context, teaching
- **Daimler AG**: automatical transmission optimizations
- **The Bosch Group**: Optimizations of Job-Shop-Scheduling problems
- further companies
  
- Systems Biology Toolbox for MATLAB
- JCell (Intra-cellular process simulation)

# Summary

- Java Framework with own GUI
- widely used in university context
- supports analysis and experiments of different algorithms
