

Assignment Sheet 7

Assignment 25 Fuzzy Set Operations

Redo parts c) and f) of Assignment 13 with the two fuzzy sets given in Assignment 10. In addition, compute the degree to which μ_1 is a subset of μ_2 using the Łukasiewicz implication.

Assignment 26 Set Representation

In Assignment 19 you were asked compute the sum $z = x - 2y$ applied to the fuzzy sets μ_1 and μ_2 with the help of the extension principle.

- Compute the result another time but only using the interval arithmetics on set representations of μ_1 and μ_2 .
- Repeat this computation for $z = \frac{x \cdot y}{4}$.

Assignment 27 Quantifiers

To describe the concept “ x is a small number”, let $x \in \mathbb{N} \cup \{0\}$ and two membership functions $\mu_1(x)$ and $\mu_2(x)$ be defined as follows:

$$\mu_1(x) = \begin{cases} \frac{20-x}{20}, & \text{if } x < 20 \\ 0, & \text{otherwise} \end{cases}$$
$$\mu_2(x) = 0.95^x$$

Compute the fuzzy truth value of the proposition “All single-digit numbers of the decimal number system are small” with respect to both μ_1 and μ_2 . As conjunction, utilize both

- $\top_{\min}(a, b) = \min\{a, b\}$,
- $\top_{\text{prod}}(a, b) = a \cdot b$.

Are the results plausible with regard to your intuition?

Assignment 28 Linguistic Variables

Driven by the discussions about possible health consequences of excessive consumption of sweets, Saint Nicholas (the German “Nikolaus”) wants to add another criterion to his well known one of “clean shoes”, namely the nutritional condition of his clientele. His uses all criteria for purpose of computing the amount of sweets in each case.

In the last days he spent lots of his time in the revision of his rules of the thumb used for this purpose. At the same time he came up with the idea of being assisted by a new Japanese “Robopet” for the future.

Fuzzy Systems

Prof. Dr. Rudolf Kruse, Christian Moewes

In its enclosed manual he got to know that Robopet works with fuzzy logic. In order to implement his rules that are written in natural language, Saint Nicholas now needs linguistic variables for the following variables:

- cleanliness of the shoes,
- degree of over weightiness,
- amount of sweets.

Find the linguistic variables with which one can describe these concepts. Note that in his rules Saint Nicolas wants to utilize both expressions (such as “great many more than 5 sweets” or “somewhat clean shoes”) and logical operations (as found in “slightly overweight or up to 130% of the normal weight”).

Hint: For the basic set of the concept “over weightiness”, it might come in handy to use, *e.g.* the ration of actual weight and recommended maximum weight.
